

PLANET HEALERS

Offering hope through action

Ecological restoration education for a world in crisis

Education in Ecology

While biology provides fundamental knowledge of living organisms, **ecology teaches us how** these organisms interact within their environment. This understanding is crucial for fostering a sense of kinship with the natural world. Our education system often overlooks ecological principles, leaving individuals unprepared to act as caretakers. By incorporating ecology into learning, we can empower communities to respond effectively to the biodiversity crisis.

Planet H

The Scale of Crisis

Extinction

1 million species are facing extinction, highlighting the urgent need for immediate conservation efforts worldwide.

Restoration Deadline

By **2030**, we must restore 30 percent of degraded ecosystems, a daunting challenge requiring immediate action and resources.

Habitat Loss

60 percent of tropical dry forests have been lost, exacerbating biodiversity loss and ecological imbalance globally.

The image shows the cover of a 'Workshop Design Kit' by Paul Morris, MSc, CERP, Planet Healers. The cover features three workshop modules: 'Workshop 1: Soil life', 'Reading Your Landscape: A Field Guide to Ecological Assessment', and 'Workshop 3: Community Action'. The central module shows a person walking on a path through a landscape. The cover also includes the text 'Three complete sessions, ready to teach' and 'Walk into any room and teach'. At the bottom, it lists 'Facilitator notes included', 'Participant materials included', and 'Timing guides included'.

The Planet Healer Path

Awakening

This stage focuses on **understanding the crisis** and realizing our role in ecological restoration efforts.

Doing

Hands-on restoration practice allows participants to engage directly with nature, reinforcing their connection to the land.

Recovery Results

Tsunul Reserve demonstrates the transformative power of ecological restoration, showcasing nature's resilience over time.

Our Collaborative Impact

Planet Healers thrives on **collaboration and community engagement**. We unite individuals from various walks of life, empowering them to actively participate in ecosystem restoration. By bringing together passionate people, we foster a deeper understanding of ecosystems and cultivate a shared responsibility for nurturing our planet. Our collective efforts demonstrate that together, we can create meaningful change and restore the earth's vitality.

From practitioner to ecological educator

Funding Request

We are seeking **US\$ 20,000** to support our Storytelling and Education. These funds will facilitate a paid digital campaign on social media, aiming to grow the Planet Healer Path community to critical mass. With a target of **500 new members** within the next year, we can amplify restoration knowledge in communities worldwide.

Thriving Ecosystems

The land has an incredible ability to recover **when supported** with the right knowledge. Our mission at Planet Healers is to reach as many people as possible, enabling them to cultivate thriving ecosystems. By connecting individuals with the essential tools and education, we can transform the landscape, fostering environments that not only survive but flourish for generations to come.
